

INTERNET VS WALL STREET

What should a Trader do?

Moodboard

BACKGROUND

The Trader gets a brief background about the events in late January through a graphic showing the variations in stock prices for Gamestop, AMC, Blackberry and NIO. The motivations behind the actions of the r/WallStreetBets forum become clear.

TRENDS IN STOCK PRICES - NATURAL VS UNNATURAL

Traders compare the unusual changes in stock prices with natural stock fluctuations for Amazon, Tesla, Apple and a few others. Unit chart showing the stark contrast between Gamestop and Google.

RISKS OF INVESTMENT QUANTIFIED

The Trader sees the risks involved in the "trending stocks" through a comparison of the value of a \$100 investment at different stages of the stock bubble.

EFFECT OF STOCK MARKET BUBBLES

The Trader sees the difference between investments at different stages in a 'bubble' and understands it on the scale on which it can affect the lives of millions. It becomes clear that sending the message is not more important than affecting so many lives.

CONCLUSION

TRADERS ARE CONVINCED TO STAY AWAY FROM THE "TRENDING STOCKS" AND UNDERSTAND THEIR EFFECT ON THE REST OF THE STOCK MARKET BETTER.
